Mobile developer and QA Automation Engineer

Versatile engineer spanning QA automation and mobile development, with 2+ years at M47 Labs where I built an internal tool that dramatically accelerated the team's development workflow (~75% faster). I ship across the stack — from App Store iOS apps (Swift, SwiftUI, UIKit, ARKit, CoreML) to Python automation and CI/CD pipelines. Apple Developer Academy alumnus and WWDC23 Swift Student Challenge winner. Please check my [Portfolio](#) and [GitHub](#) to check my public projects.

Italian currently in Spain. I'm highly driven by curiosity and bring strong creative thinking into my work, both in problem solving and in generating new ideas. I thrive in environments that give me the freedom to express creativity and explore unconventional solutions beyond purely technical execution. I think of myself as a very fast learner and very adaptable.

M47 Labs - QA Automation engineer | August 2023 - Present Madrid, ES

- **Built an internal tool** that cut the team's development time by ~75% adopted across by multiple teams.
 - **Designed and automated** unit and regression test suites.
 - **Maintained and refactored production codebases**, quickly shifting into the TOP 10 contributors of the project.
 - **Collaborated in an Agile team on client projects** with leading IT company, using, XCTest, Swift and Python.
- Education

Education

Bachelor's Degree in Computer Engineering Università Mercatorum 2023 - 2026 Remote, IT

Started my studies at “Università degli studi di Napoli Parthenope” and later completed my bachelor's degree remotely at “Università degli studi Mercatorum”.

Apple Developer Academy - Pier Program 2022 – 2023 San Giovanni, Naples, IT

The pier program is the second year of the Apple Developer Academy where for one year you work on a single project with the same team and apply all the notions and (agile) work methodologies learned in your student year.

My role during this period was to work as a "backend" developer on the project in association with Barefoot International. I joined a project that has been going on for years characterized by a very large codebase and using very old components of Swift because the app needs to be supported even on very old phones.

Apple Developer Academy 2021 – 2022 San Giovanni, Naples, IT

It was a nine-month experience where we studied all aspects of application development and where I specialized in coding. In addition to coding, I also had the opportunity to explore all aspects of app development from process, UI and UX ideation to implementation.

iOS Foundation Program - Advanced course (Università Parthenope) 2020 Remote

It was a two-month experience where we delved into application development also for tvOS and watchOS.

iOS Foundation Program - Base course (Università Parthenope) 2020 Villa Doria d'Angri, Naples, IT
